architecturales
culturelles

packaging

installer son **application** comme
une simple **bibliothèque***

* configuration laissée au soin de l'utilisateur

simplicité
traçabilité
reproductibilité

OS **deb / RPM**
Application **setup.py**

★ ★ ★ ★ ★ ★ ★ ★

ATTENTION PYTHON COMRADES NEW ORDERS FROM THE MINISTRY OF PACKAGING!

SONS AND DAUGHTERS OF THE GLORIOUS
PEOPLE'S PYTHONIC REPUBLIC
USE **DISTRIBUTE** AND **PIP**
THAT IS ALL.

THIS MESSAGE HAS BEEN APPROVED BY @JEZDEZ, HIGH CHANCELLOR OF PACKAGING

django

nettoyez-moi tout ça

arrêter d'altérer sys.path

```
project/
    __init__.py
    urls.py
    app1/
        __init__.py
        models.py
    app2/
```

```
from project.app1.views import stuff
```

Application réutilisable : **package séparé**

```
from registration.models import RegistrationProfile
```

Application non réutilisable : **embarquée**

```
from project.app.models import Stuff
```

requirements : ***versions explicites***

Django==1.4

PIL==1.1.6

pas de liens git

setup.py

```
from distutils.core import setup
from setuptools import find_packages

with open('requirements.txt') as reqs:
    install_requires = reqs.read().split('\n')

setup(
    name='project',
    version=__import__('project').__version__,
    packages=find_packages(),
    include_package_data=True,
    zip_safe=False,
    install_requires=install_requires,
)
```

MANIFEST.in

pour tout ce qui est non-python

```
include requirements.txt  
recursive-include project *
```

```
recursive-exclude project *.pyc  
recursive-exclude project *.scss  
exclude project/settings.py
```

settings

Packagé : project/default_settings.py

Déployé : settings.py

```
from project.default_settings import *

DATABASES = {
    ...
}
```

layout final

requirements.txt

setup.py

MANIFEST.in

project/

 __init__.py

 default_settings.py

 settings.py

 app1/

 app2/

Déploiement

```
env/  
public/  
    static/  
settings.py  
wsgi.py
```

```
./env/bin/gunicorn wsgi:application
```

utiliser add2virtualenv pour rendre **wsgi** et
settings importables sans toucher PYTHONPATH

pip et paquets privés

--find-links : file:///path/to/packages

--index-url : structure de type
<http://pypi.python.org/simple/>

bien héberger **tous** ses paquets
pypi tombe, les versions disparaissent

Workflow final

Déployer

(incrément n° de version)

```
python setup.py sdist
```

(upload)

```
pip install -U project --find-links ...
```

Rollback

```
pip install project==X.Y.Z --find-links ...
```
